Film-to-Glass Information

Film-to-Glass Application Submittal

This document provides guidance for the most common glass types, not all applications are covered. If you are not sure about a specific film-to-glass application or your situation is not pre-approved, you may submit a film-to-glass application to Solar Gard Technical Services at techservices@solargard.com, to ensure glass breakage and insulated glass (IG) unit seal failure warranty coverage, if available in your region. Film-to-Glass Application (SK0322) can be downloaded from the Dealers Portal. Any film may be applied to glass constructions consisting of ALL panes being tempered.

Film-to-Glass Application Disclaimers

All installations over 2,500 square feet (232 sq. meters) require a film-to-glass application (SK0322) and approval to ensure warranty coverage. Round, bent or laminated glass may be approved, although a film-to-glass application must be submitted and written approval received to ensure glass breakage and insulated glass (IG) unit seal failure warranty coverage. However, this limited warranty is NOT AVAILABLE when film-to-glass applications include any of the following:

- 1. Textured or wired glass;
- 2. Any glass with more than one window film applied;
- Any window where light can be seen between the glass and the framing system;
- 4. Any plastic or polycarbonates;
- 5. Quadruple pane insulated glass (IG) units;
- 6. Glass with paint, lettering, vinyl graphics or other ornamentation;
- 7. Glass with any single edge dimension greater than 10 feet (3 meters);
- 8. Any single glass pane greater than 100 square feet total (9.3 sq. meters);
- Any single insulated glass (IG) unit greater than 40 square feet total (3.7 sq. meters); For Panorama® Hilite film only, any insulated glass (IG) unit greater than 60 square feet total;
- 10. Any single pane with partial film installation. Film must cover the visible opening;

- 11. Glass 3/8 inch (10 mm) or thicker; For laminated glass, use the combined thickness of both panes;
- 12. Damaged, chipped, cracked or scratched glass;
- 13. Glass with concrete framing;
- 14. Glass with metal framing that has no gaskets or seals;
- 15. Glass with framing sealant or gaskets that are no longer resilient;
- 16. Broken glass or insulated glass (IG) unit/s with seal failure prior to film installation;
- Any building that has a history of glass breakage and/or seal failure problems; or
- 18. Any film applied to spandrel glass.
- 19. Any interior film applied to skylight glass.

Low-E Caution (LEC) Warranty Coverage

The following scenarios outline the necessary warranty coverage parameters when installing a Low-E Caution (LEC) film to an insulated glass (IG) unit. The Low-E Caution (LEC) indicates possible glass breakage and insulated glass (IG) unit seal failure warranty coverage ineligibility, due to an increased risk when a LEC film is installed on a double pane, insulated glass (IG) unit with a Low-E coating.

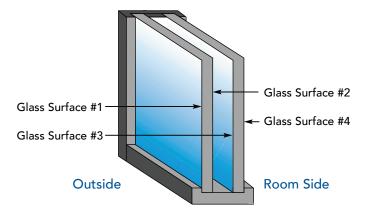

Any exterior LEC window film installed on a double pane insulated glass unit that has a low-e coating on surface #2 and a Solar Heat Gain Coefficient (SHGC) of 0.58 or greater is pre-approved for glass breakage and insulated glass (IG) unit seal failure warranty coverage.

Any interior LEC window film installed on double pane insulated glass unit that has a low-e coating on surface #3 and a Solar Heat Gain Coefficient (SHGC) of 0.61 or less is pre-approved for glass breakage and insulated glass (IG) unit seal failure warranty coverage.

Side View Of Dual Pane Insulated Glass (IG) Unit

Triple Pane Clear Warranty Coverage

#3

A film-to-glass application must be submitted and written approval received to ensure glass breakage and insulated glass (IG) unit seal failure warranty coverage for constructions utilizing glass with a thickness greater than 3/16" (4mm).
