

We Make Your Glass Perform!

- V-KOOL has the highest rating for visible light transmission **AND** solar heat gain coefficient with certification from the National Fenestration Rating Council (NFRC)
- Assist in achieving LEED certification
- May qualify for certain tax credits and/or energy provider rebates
- The world's first clear, spectrally selective glass application
 - Simply put V-KOOL blocks the heat and allows the light to pass
- Harvests the day light
 - Allows over 70% of the light through
- Reflects heat
 - Blocks over 94% of infra-red rays
 - Blocks the heat by reflection NOT absorption
- Reflects UV
 - Blocks 99%
- V-KOOL will not distort or hinder your view, day or night
- Will last approximately 20 years or longer
- **55%** of the total solar energy is rejected, translating to energy savings
- Reduces the necessary HVAC size for new construction and/or reduces load on existing HVAC systems
- Will not change the architectural integrity of a building or home
- The green and safe retrofit
- Less expensive than replacing existing glass, almost all existing glass can be retrofit
